

Hamill Manufacturing Company was founded in 1952 and is located in Trafford, PA. We have more than 60 years of manufacturing experience, specializing in precision machining, welding, and the fabrication of complex components and assemblies. Our reputation and extensive knowledge base allows us to serve various industries including defense, aerospace, petro chemical, and both commercial and non-commercial power generation. In addition to machining and welding, we provide services such as drafting, manufacturability reviews, machine consulting, manufacturability training, and a wide variety of non-destructive testing disciplines.

Hamill's vision... "Provide the finest in precision manufacturing services." To thrive and effectively compete in today's business environment, we adhere to strict quality systems and processes. Our quality management system allows us to provide excellent customer satisfaction by meeting or exceeding their quality expectations with established internal auditing processes, management reviews, and defined quality metrics.

Hamill Advantage

Hamill's extensive manufacturing knowledge allows us to serve a wide variety of industries that require the manufacturing of complex machined parts and assemblies. We also provide manufacturability reviews to determine the best manufacturing processes and tolerance/GD&T applications to ensure the final products exceed customer expectations not only prior to production, but also throughout the manufacturing process.

Precision Machining Services

Hamill's machining services include turning, multi-axis milling, and electrical discharge machining in a spacious, temperature-controlled facility. Our equipment has the ability to machine components ranging from small, intricate items to large items for both small to large-scale production runs. We also purchase the newest cutting tool technology and create our own custom tooling for some of our customer's most complicated parts.

Precision Welding

Hamill employs highly skilled welders who are able to perform very tedious methods of welding that only a handful of people in the world have the specific qualifications to perform. Our customers often look to us to determine if certain welding applications are feasible. Our combined welding knowledge and background allows us to choose the appropriate and optimal processes. Welding methods that our welders perform include Tungsten Inert Gas (TIG) welding, Metal Inert Gas (MIG) welding, and Shielded Metal Arc welding (stick welding), and Flux-core welds.

Philosophy

Core Values of Hamill Manufacturing

GRIP

- Growth** – Seek to reach our full potential
- Responsiveness** – Maintain our customer focus
- Integrity** – Do the right thing
- Pride** – Strive for perfection

Proud Members of

and

GROWTH is the essence of life, both biologically and in business. Without it a cell, an organism, or a business dies. All of us want to achieve our own potential and our own personal success. We also want the company to help us in that endeavor. Hamill is committed to helping each employee maximize his/her personal growth through training, mentoring, and opportunity.

RESPONSIVENESS to customers, whether external or internal, is critical to keeping the business running smoothly. In a world where getting and keeping customers is harder than ever, we must be very responsive to them and their needs at all times. When we are running as leanly as possible to stay competitive, we must be responsive to our internal customers as well to keep processes running smoothly.

INTEGRITY is a value that everyone agrees is most important. Always doing the right thing is never easy, but it is always easier to live with a decision when integrity is the prime decision criteria.

PRIDE is also very important to focus on when it comes to values. The reputation that Hamill has gained since its inception has resulted from the pride each employee has taken in what he or she produces. It is evident in the way the building and grounds are maintained. It is manifested in the orderliness and cleanliness of our workspaces. It is reflected in the way a Hamill product is finished after machining or welding. It means not cutting corners when producing a product of high quality.

...Striving to be the world's premier manufacturer of precision industrial products.
